## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-11, drawn to sensor head with sensor head body with plural ports each engaging interchangeable sensor components by application of linear force upon the component, classified in class 73, subclass 152.01+.
- II. Claims 18, 19, 24-34, drawn to a sensor head with sensor head body with plural ports engaging sensor components wherein the head includes a circuit board with plural electrical interconnection plugs for connecting the components, classified in class 73, subclass 866.5.
- III. Claims 35-43, drawn to a sensor head assembly with a sensor head engaging and connecting to interchangeable sensor components and enclosure device engaging and supporting components at predetermined proximity to the sensor head, classified in class 73, subclass 865.8 or 152.01+.

Claims 12-14 and 20-23 are considered linking claims linking the Inventions I and II and will be examined with election of either of these groups.

Claims 15-16 are considered linking claims linking the Inventions I and III and will be examined with election of either of these groups.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I, III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed

Art Unit: 2856

does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not require engaging interchangeable sensor components. The subcombination has separate utility such as a sensor holder in a well bore generic logging tool.

Inventions I and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not require enclosure device engaging and supporting components at predetermined proximity to the sensor head. The subcombination has separate utility such as a probe head orientation indicator which uses sensor or feelers at specific positions relative to the probe head to measure and determine the precise position of the probe head.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Groups II and III and the search required for Group II is not required for Group III, restriction for examination purposes as indicated is proper.
